

# Backing up your bookmarks (Safari)

## Option 1

1. Go to **File**, Export **Bookmarks**:

2. Save the file as **Safari Bookmarks**. It will show up as an html file, which will open up with all your bookmarks saved and ready to use.

3. Click on each link in the document and bookmark in Safari as usual.

Option 2

# Advanced Instructions

## Backing up your bookmarks (Safari)

### Safari bookmarks

Safari bookmarks are all stored in a file called Bookmarks.plist, which is located at ~/Library/Safari/. To get to this file in the Finder, choose **Home** from the **Go** menu. Open the Library folder, then open the Safari folder.

- **To back up:** Make a copy of the file in another location by holding down the Option key and dragging the Bookmarks.plist file to another location (such as the Desktop). The original file will remain (do not remove the original file from this location or your Safari bookmarks will be gone!).

As an alternative, you can compress the file into an archive—select the Bookmarks.plist file, then from the **File** menu in the Finder, choose **Create Archive**. The original file will remain.

- **To restore:** Simply move the backup copy of Bookmarks.plist to the ~/Library/Safari/ folder. If you're restoring from an archive, don't forget to decompress the file (just double-click it).

**Note:** The Bookmarks.plist file contains only the Safari bookmarks for the currently logged-in user. If other users on the same Mac have their own user accounts and personal bookmarks, their Bookmarks.plist files are located in their Home folders.
